

## WRH History

WRH Industries has developed, commercialized and innovated the plastics business for more than 60 years, creating processes, products and patents for commercial applications.

Our founder, Arthur Hartwell, was a plastics pioneer in historic applications such as moulding Titleist's first golf balls and Samsonite's clamshell luggage, and co-invented structural foam moulding as a new and now globally-recognized moulding technique. In 1972, Warren Hartwell established plastics as a next generation material for the pharmaceutical, confectionery and food processing industries.

## WRH Advantages

- Your manufacturing choice for environmentally-friendly direct food contact handling and packaging solutions.
- Our strength is your security, protecting your safety, quality, and productivity with patented USDA/FDA/NSF compliant extreme-temperature direct-food contact materials and designs.
- Four generations of unparalleled plastic engineering, design capabilities and material expertise.
- Our customer-focused culture offers cutting-edge innovations and collaborative engineering to meet your challenges.

## WRH Today

In addition to our core food processing, confectionery and pharmaceutical clientele, we have spent more than twenty years successfully serving the QSR, foodservice, meat, seafood, grocery and agricultural sectors with innovative and state-of-the-art solutions in handling, process, equipment and ecological packaging.

***We look forward to earning your business and exceeding your expectations.***

***Our Strength is Your Security.***
